

Technical Bulletin
No: 903 – ON / OFF Switch Malfunction

Model: ESA-10

No: 903

Subject: ON / OFF Switch Malfunction

Date: 10/16/95

Symptom: The ON or OFF switch will function only while it is being held, as soon as the switch is released the channel reverts to its opposite state.

Solution: Replace the switch that correlates to the opposite state; e.g., if the channel only comes on when the ON switch is held replace the OFF switch.

Procedure: Power down the console. Desolder the defective switch from the switch board and remove it through the top of the console. Install a new switch through the top of the console and resolder it to the switch board. Power up the console and test the channel for proper operation.

Use a Micro AML11CBA3AA switch Radio Systems P/N 3118. The switch board (P/N 3005) is also available from Radio Systems if needed.
